How to use this catalogue

The main part of the catalogue is the comprehensive list of **phyproof**[®] Reference Substances which are listed in alphabetical order according to trivial name. This listing contains the chemical structure, the molecular formula and weight, the CAS registry number, and common synonyms of each compound. If you are unable to find the substance you are looking for please use the additional indices that we have included for your convenience:

Index I contains an **alphabetical list of all substances and their synonyms**. It provides information which name of a reference substance is used in this catalogue and guides you directly to the correct page.

Index II contains a list of the **CAS registry numbers** for each reference substance.

Finally, in **Index III** we have sorted all reference substances by structure based on the **class of natural compounds** that they belong to.

If you are planning to analyse a **specific plant** please visit our webshop at <https://phyproof.phytolab.com> and search for the desired botanical species using the extended search function. **Common marker compounds** that have been described to occur in this herb will then be displayed.

Our mission

Our goal is to supply our customers with reference substances of unique purity in accordance with the PhytoLab quality philosophy. Our team is committed to provide quick and efficient customer service. We appreciate all your future requests!

Distributors & Area Representatives

With the exception of orders from the US, Canada & Mexico we deliver globally from our headquarters in Germany.

For your convenience we have additionally entered into several **global & local distribution agreements** with experts in the area of import & export of reference substances. You always have the option to place your order directly with us or with one of our distribution partners (with the exception of the US & Canada where we are represented exclusively by MilliporeSigma). When you order through one of our distribution partners the distributor will handle the import and provide you with goods and invoice locally.

We also have a number of **local area representatives** who can assist you with all your questions and needs. You may also place your order with our area representatives. Such orders will then mostly be handled and shipped to you directly from our German headquarters, and the import process remains in your own responsibility. Some exceptions apply.

Quantities

phyproof[®] Reference Substances are – unless pre-packed – available in every desired quantity and unit size. Custom packs containing exactly the quantity that you require for your analytical needs are our specialty. Take advantage of our individual service and maximum possible flexibility at zero extra charge. Please visit our webshop for further information.

For all **phyproof**[®] Reference Substances the exact weight with two decimals is given on the inner label of each vial. This enables the preparation of stock solutions with a defined concentration without losing any

valuable material and without the need to weigh the reference substances again, in case that a high-precision balance is not available.

Prices

All prices net and ex works (shipping costs not included). Minimum quantity rules apply. The following discounts, which are always calculated with reference to the individual unit size, are automatically considered in the ordering process:

- from 50 mg: 10 %
- from 250 mg: 15 %
- from 500 mg: 20 %
- from 1000 mg: 25 %

If you require an individual quotation please visit our webshop. Alternatively, please contact our **phyproof**[®] Reference Substance Team or one of our area representatives or distributors.

Availability

Most **phyproof**[®] Reference Substances are available from stock for immediate delivery. For up-to-date information please visit our webshop, or contact our **phyproof**[®] Reference Substance Team or one of our area representatives or distributors to confirm availability of the desired quantities.

Specifications

Most of our **phyproof**[®] Reference Substances are certified as **primary reference substances** as defined by the European Pharmacopoeia, United States Pharmacopoeia, and other international institutions. Their identity is confirmed by a combination of advanced analytical techniques such as NMR, MS and IR. In addition, our reference substances feature a defined absolute content value that is based on a mass balance approach considering chromatographic purity as well as content of

water, residual solvents and inorganic impurities. Counterions are also taken into account where applicable.

phyproof® Reference Substances that are available in smaller quantities only are identified in the same comprehensive way as our primary reference substances, chromatographic purity included.

For detailed information on specifications and the **degree of certification** please contact us or visit our webshop in which exemplary certificates of analysis of the currently available batches are at your disposal for review prior to ordering.

Documentation

phyproof® Reference Substances are delivered at no extra cost together with the following documents:

A detailed **technical data sheet** including

- general information such as the structural formula, molecular formula, molecular weight, CAS registry number, as well as the recommended storage conditions and handling instructions
- a description as well as a sample chromatogram of the chromatographic method that was applied to determine the purity

A comprehensive **batch-specific certificate of analysis** with

- information about all the identity tests that were performed
- individual quantitative results for chromatographic purity and also on content of water, residual solvents and inorganic impurities (depending on the degree of certification)
- for primary reference substances: a certified absolute content, either based on a mass-balance approach considering the individual quantitative results mentioned before, or based on quantitative NMR measurements
- information about the stability period/expiration date

Material safety data sheets (MSDS) are provided in printed form or can be downloaded in our webshop.

Additional **spectroscopic, spectrometric or chromatographic raw data** for all analyses mentioned on our COA can always be made available free of charge.
